# Liquid Filter™

Now You Can Always Breathe Clean Air Anywhere!  
Use **Liquid Filter** wherever Clean Air is Important

Use **Liquid Filter** to:

Remove airborne pollutants

Neutralize Persistent Odors

- **REMOVES** Dust Particulates
- **REMOVES** Odor Particulates
- **REMOVES** Smoke Particulates
  - *Attracts and Retains Particulates down to .001 micron in size.*

#### **Liquid Filter** Applications:

- Smoke areas
- Vehicles
- Laundry processing areas
- Public use facilities
- Employee Break and Rest areas
- Industrial / Residential Air handling mechanicals
- Any indoor environment where "Cleaner Air" is important

Always spray **Liquid Filter** as a mist!

**When Liquid Filter is sprayed, it attracts and holds airborne particulates.**

#### **ELIMINATE ODORS AND CLEAN THE AIR**

**Complete Room Control:** When **Liquid Filter** is sprayed, it *does* attract and hold most airborne particles, *including those with odor*.

- **To enhance indoor air cleaning** use 3 – 5 light mist of **Liquid Filter** near the edge of the room. The particulates that will be trapped there can be picked up the next time you mop or vacuum the room.
- **Spot odors** can also be managed by misting **Liquid Filter** near the odor source, and cleaned within the next 36 hours.
- **When applied to an absorbent material**, the odors in the area will be attracted to the media on which the **Liquid Filter** was applied. The Odors will be *captured within the moistened media*. After a couple of days, simply wash or replace the absorbent media with a fresh/new moistened media pad.

**Whole House Air Cleaning** – **Liquid Filter** can be used on HVAC or Furnace Filters, to enhance the collection of airborne particles. Simply apply 6 – 8 mists on both sides of the filter material, at your regular maintenance intervals.

**DRAINS** - Once daily, floor drains need to be cleaned and no more than 2 or 3 light mists of **Liquid Filter** should be applied directly to the drains. Examples of drains to be sprayed are sinks, showers, industrial floor drains, or any other types of commercial use drains in the building.

**Liquid Filter is 100% safe for the environment**

**CONTAINS: Only Natural Earth Elements!**

**Providing a Healthier Environment for the Future**
