

NEW IMPROVED! ZERO BUG ZONE

First, we appreciate your business, and hope you're truly satisfied with your new Zero Bug Zone

REMEMBER: *The solution is LIGHT ACTIVATED!*

How do I use my ZBZ ?

- Just remove the units from the packaging.
- Hang or set the units in the area you want protected, and just walk away! **There is NO Dispensing required !** Zero Bug Zone is packaged in 22 oz containers that are to be hung no more than 15ft above ground level, and not more than 70ft apart. **It is important that each unit be subjected to LIGHT for 3-5 days!** Placing the units in this manner will create a Zone of protection that will drive insects away within 3 – 5 days. A twin-pack of Zero Bug Zone will protect a 3500 ft² area. An occasional new bug will enter the zone of protection but the Zero Bug Zone will soon drive the bug out.
- Zero Bug Zone® units work on most insects, but we have added a specially designed **Internal Light Source** inserts to each unit to boost its effectiveness and “Supercharge” the solution. This internal light source does not need to be operational 24/7, **just when you want to “supercharge”.**
- **To activate the Internal Light Source; push down on the “Soft Touch” Cap.**
- Once you're ready to turn the Light “OFF” **simply push down on the “Soft Touch” Cap again.**
- The Internal Light Source should last up to 60 hrs of continuous use. (These are easily replaceable; just call our Customer Service for a replacement).

Results will vary, depending on the environment in which this product is used. Remember, there is no substitute for good housekeeping practices (trash management, food pick up, etc.), but the results you will get from the use of Zero Bug Zone will be drastic and noticeable.
