What is Zero Bug Zone®?

No matter where you live in the world, bugs and pests exist, and are a very important part of our ecosystem. **Zero Bug Zone®** creates a “**bug free**” zone without killing or attracting the insects we just want relief from.

Zero Bug Zone® is a uniquely formulated product designed to give off a static frequency that drives insects crazy! After just a few days of use, **Zero Bug Zone®** will drive mosquitoes, flies, wasps, termites, fleas, hornets, ticks, and just about any insect you can think of out of the protected “**zone**” of coverage.

Zero Bug Zone® is the low cost, non-toxic, environmentally safe and friendly product that consumers have been waiting for to solve their pest control needs!

Liquid contents are:

How does ZBZ? work?

Zero Bug Zone® works to drive insects away from the protected areas where **Zero Bug Zone®** has been activated.

The product does this through the combined use of light and energy. After the units are exposed to light for at least 3-5 days, they become “**activated**”. Once activated, **Zero Bug Zone®** uses all available light sources to project the energy contained within the product toward a given area.

By controlling the light and energy in this manner, a “**zone**” of protection is created that repels insects in a 35 foot radius of the product. As the light and energy is projected from the unit it disrupts the insects’ central nervous system to such a high level of irritation that causes them to leave the protected area.

Zero Bug Zone® does not affect larger animals or human beings as the low levels of light and energy projected from the product are undetectable to larger nervous systems.

Product is Light Activated
No Spray • No Odor • No Hassle • Just Hang It!

How do I use ZBZ?

All **Zero Bug Zone®** units works on most insects, but we have added specially designed Color Refractor inserts to each unit to boost it’s effectiveness on certain types of Insects. So, choose the color for the insect group you wish to protect against:

·**Blue:** Mosquitoes, Wasps, Hornets

·**Black:** Flies, Fleas and Ticks

·**Red:** Termites

Once you have selected your unit type, determine how many units you will need to cover the “**bug free zone**” you wish to create. Each unit is recommended to be placed no higher than 15 ft. off the ground and within 70 ft from each other to create a 3500 sq. ft. zone of protection. An occasional new bug will enter the zone of protection but the **Zero Bug Zone®** will soon drive the bug out.

Use **Zero Bug Zone®** to protect; Your home, schools, stables, dog kennels, food preparation facilities, large outdoor events, costly termite damage, pools, ***anywhere insects gather!***
