Toxic Ingredients No Longer Needed for Insect Control: *Zero Bug Zone*[®] Sets New Standard with Organic, Biodegradable, Non-Toxic, Highly Effective Indoor/Outdoor Insect Repellent

MINNEAPOLIS, MN — “Consumers are no longer willing to accept the habitual use of pesticides and toxic ingredients to fight insects in our homes, schools, offices, and on the foods we eat,” according to Kenneth Brimmer, CEO of GoZbiz.com. “The demand for products that are organic, non-toxic and earth friendly is at an all time high, especially for traditionally toxic products, such as insect control formulas. Our company is proud to play a leadership role in providing a solution that simultaneously helps to eliminate insect problems both indoors and outdoors, while maintaining a safe and pesticide-free environment for consumers and industry.”

Brimmer’s comments were made recently when addressing the topic of business leadership and the environment. GoZbiz.com, a division of publicly-held Sten Corporation (Nasdaq: STEN), is a distributor of the organic break-through insect repellent *Zero Bug Zone*[®]. According to Brimmer, “*Zero Bug Zone*[®] is revolutionizing the way consumers and businesses safely deal with unwanted mosquitoes, flies, hornets, wasps, termites, fleas, ticks, and other bugs and insects. *Zero Bug Zone*[®] utilizes a

-More-

proprietary process and scientifically engineered formulation that utilizes the principles of static frequency to create an insect-free zone. The static frequencies drive the bugs away but does not kill them like the poisonous pesticides and most other products on the market. *Zero Bug Zone*® is extremely effective, and at the same time it is organic, all-natural, biodegradable, and non-toxic.” Brimmer added, “Those are adjectives you typically don’t associate with a bug repellent.”

Zero Bug Zone® is made in the USA and designed for multiple uses, both indoor and outdoor, including homes, yards, decks, food preparation facilities, schools, universities, hospitals, livestock and poultry production facilities, barns, animal shelters, veterinarian clinics, and any other area plagued by insects.

Zero Bug Zone® is packaged in two 22 oz containers that are to be placed no more than 70 feet apart. The containers can either be hung (no more than 15ft above ground level) or placed on a flat surface. Placing the units in this manner will create a zone of protection that will drive insects out within 3 – 5 days. The liquid contents are light activated and it takes 3-5 days of light exposure to "charge". A pack of two *Zero Bug Zone*® containers will protect a 3500 square foot area and will work up to 6 months without needing replacement.

About Zero Bug Zone®

Zero Bug Zone® may be used either indoors or outdoors, anywhere where mosquitoes, flies, termites, hornets, and wasps are an issue. Visit www.GoZbiz.com for the product and additional information.
